

Hospital Supply Data and National Item Master

SV-2 Systems Resource Flow | DIV-1 Conceptual Data Model | DIV-2 Logical Data Model

Architecture reflects the supplied workflow and the generated 5,000-row cleanfile and 10-item national master.

5,000

clean records

26

cleanfile fields

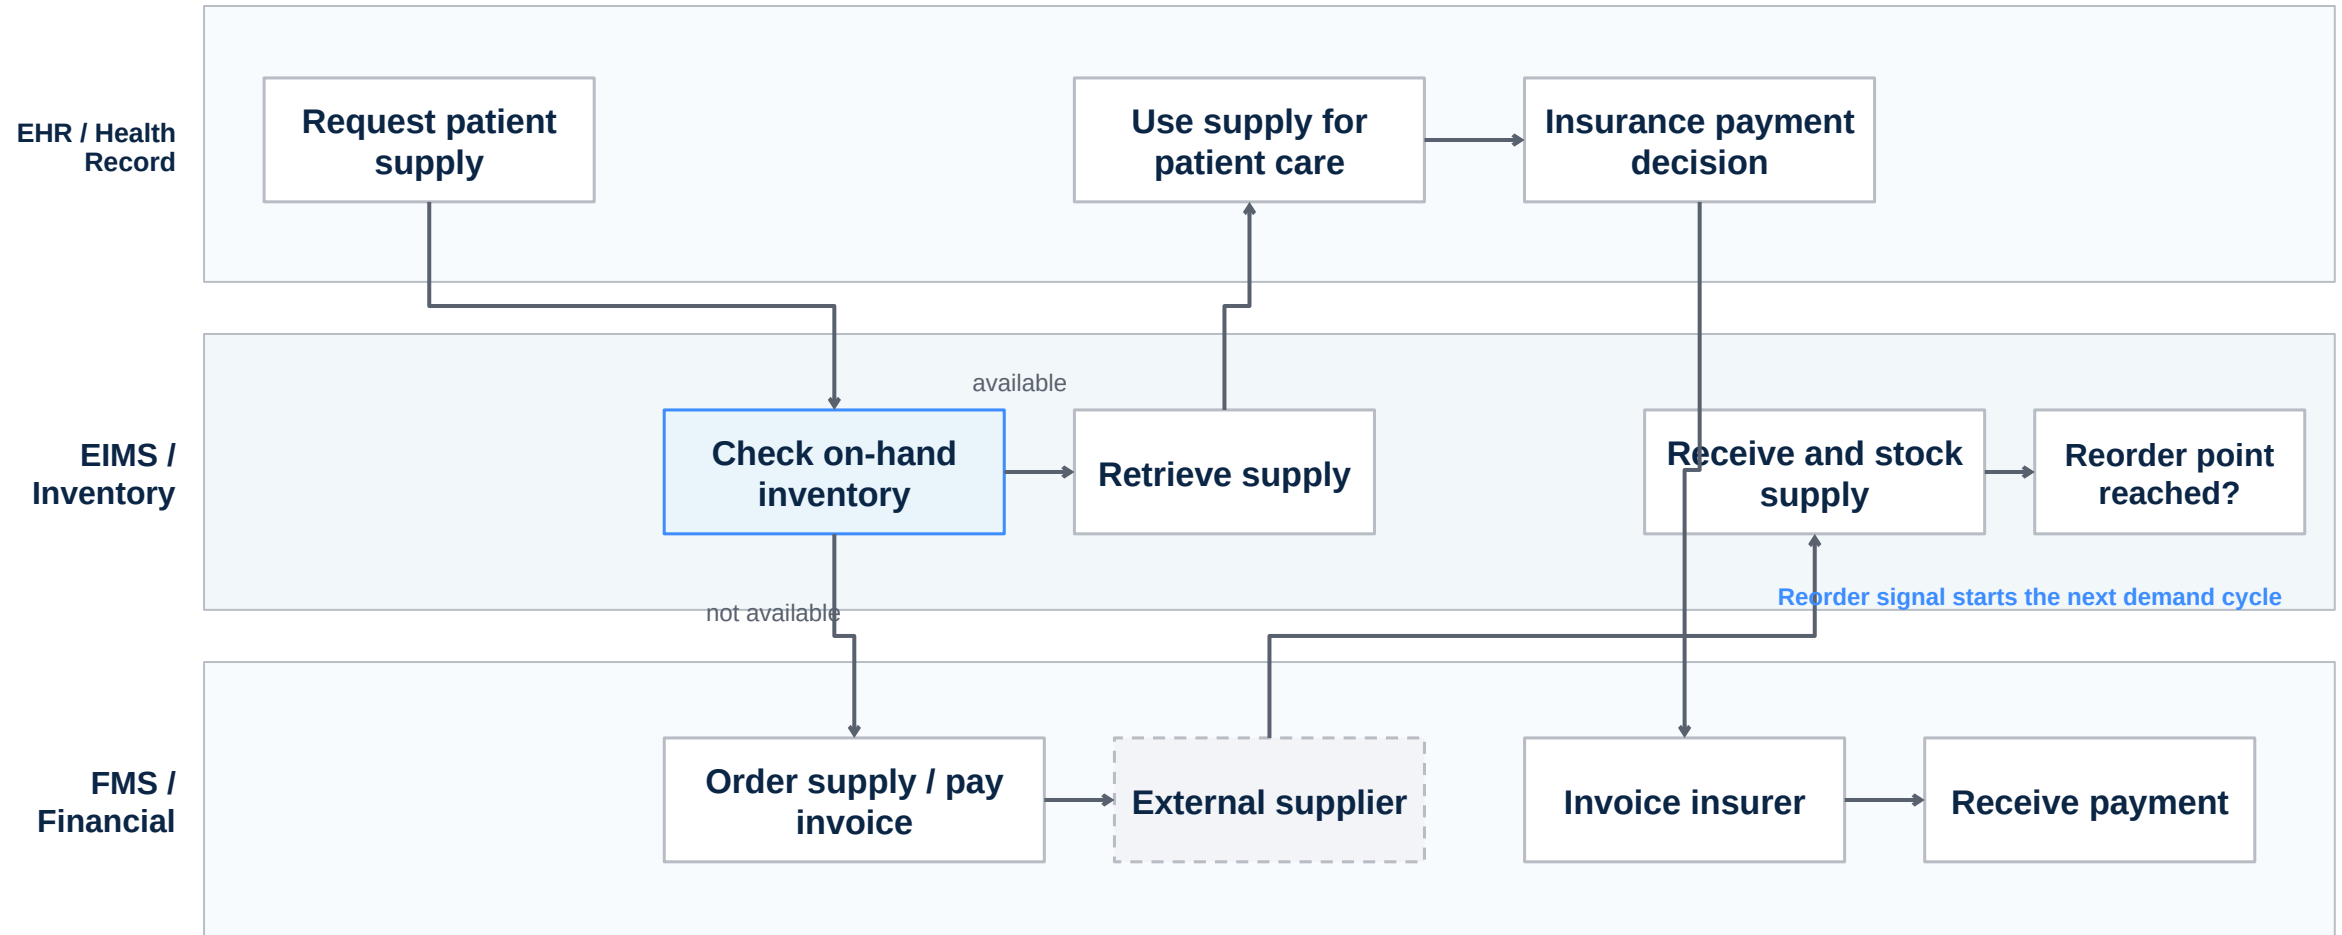

15

master fields

3,549

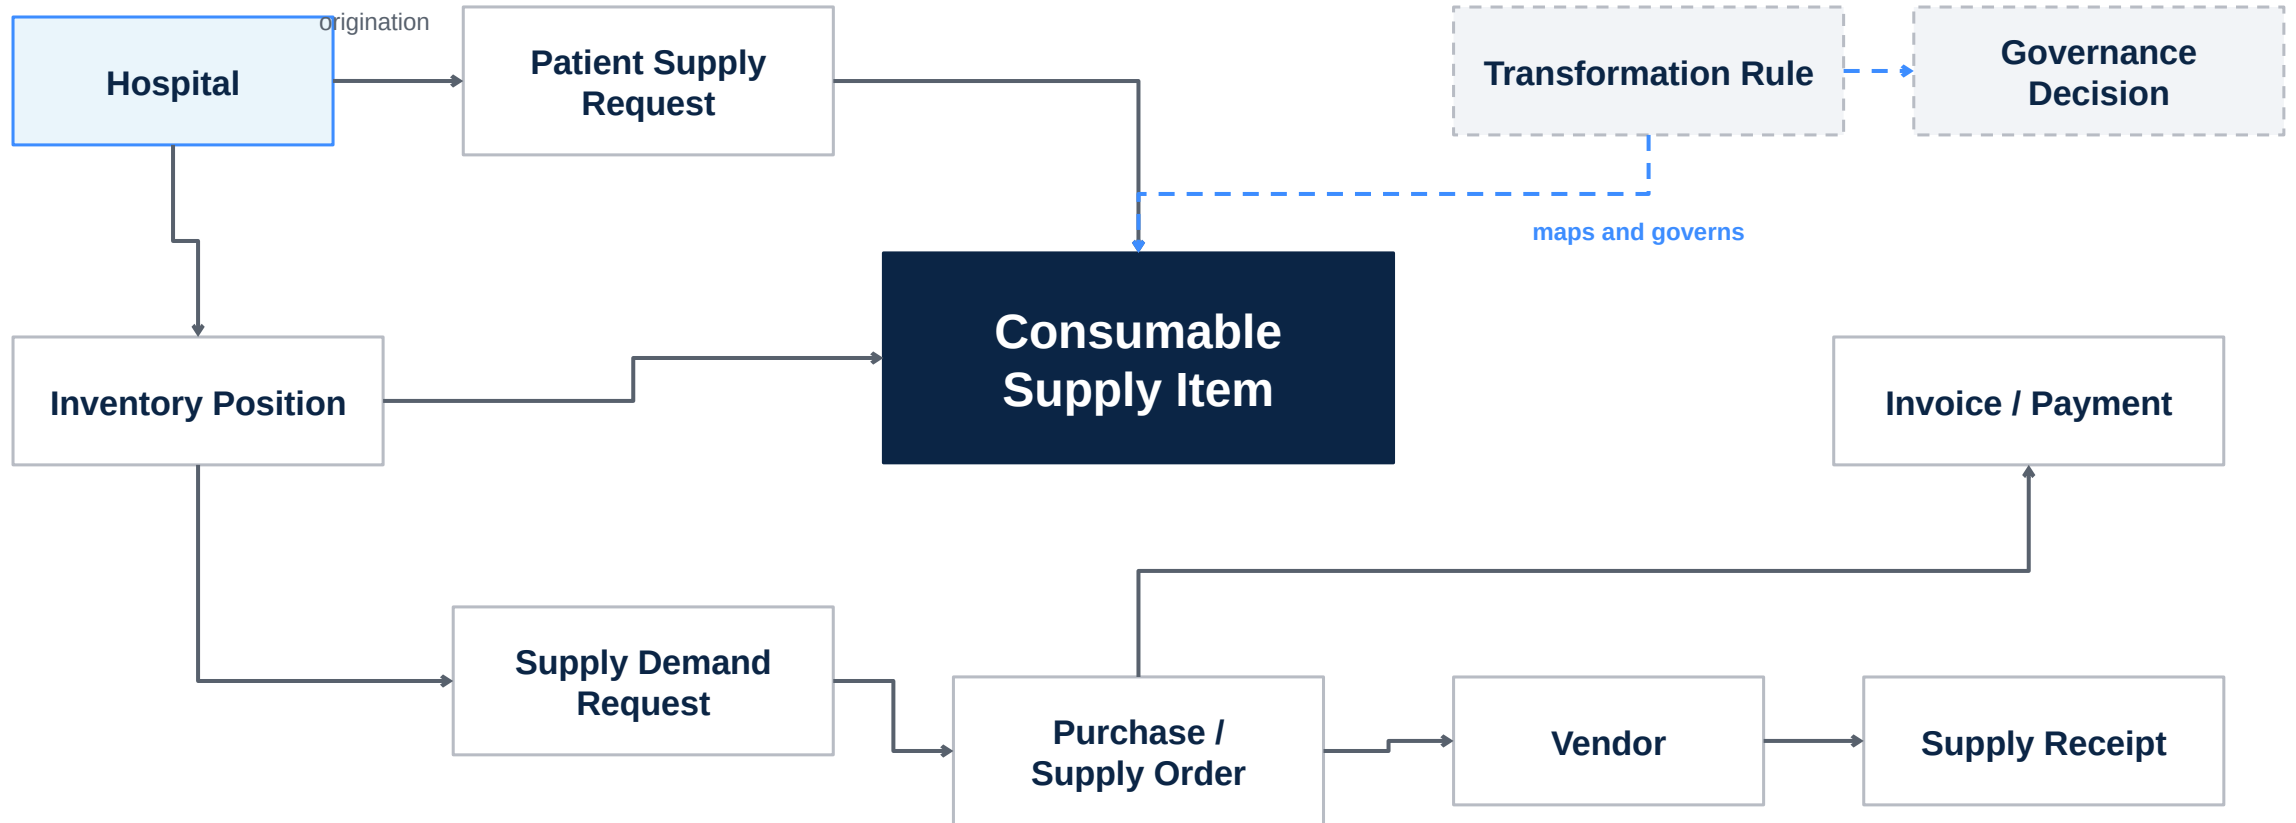

review records

Clinical demand, inventory, and finance exchange governed resources

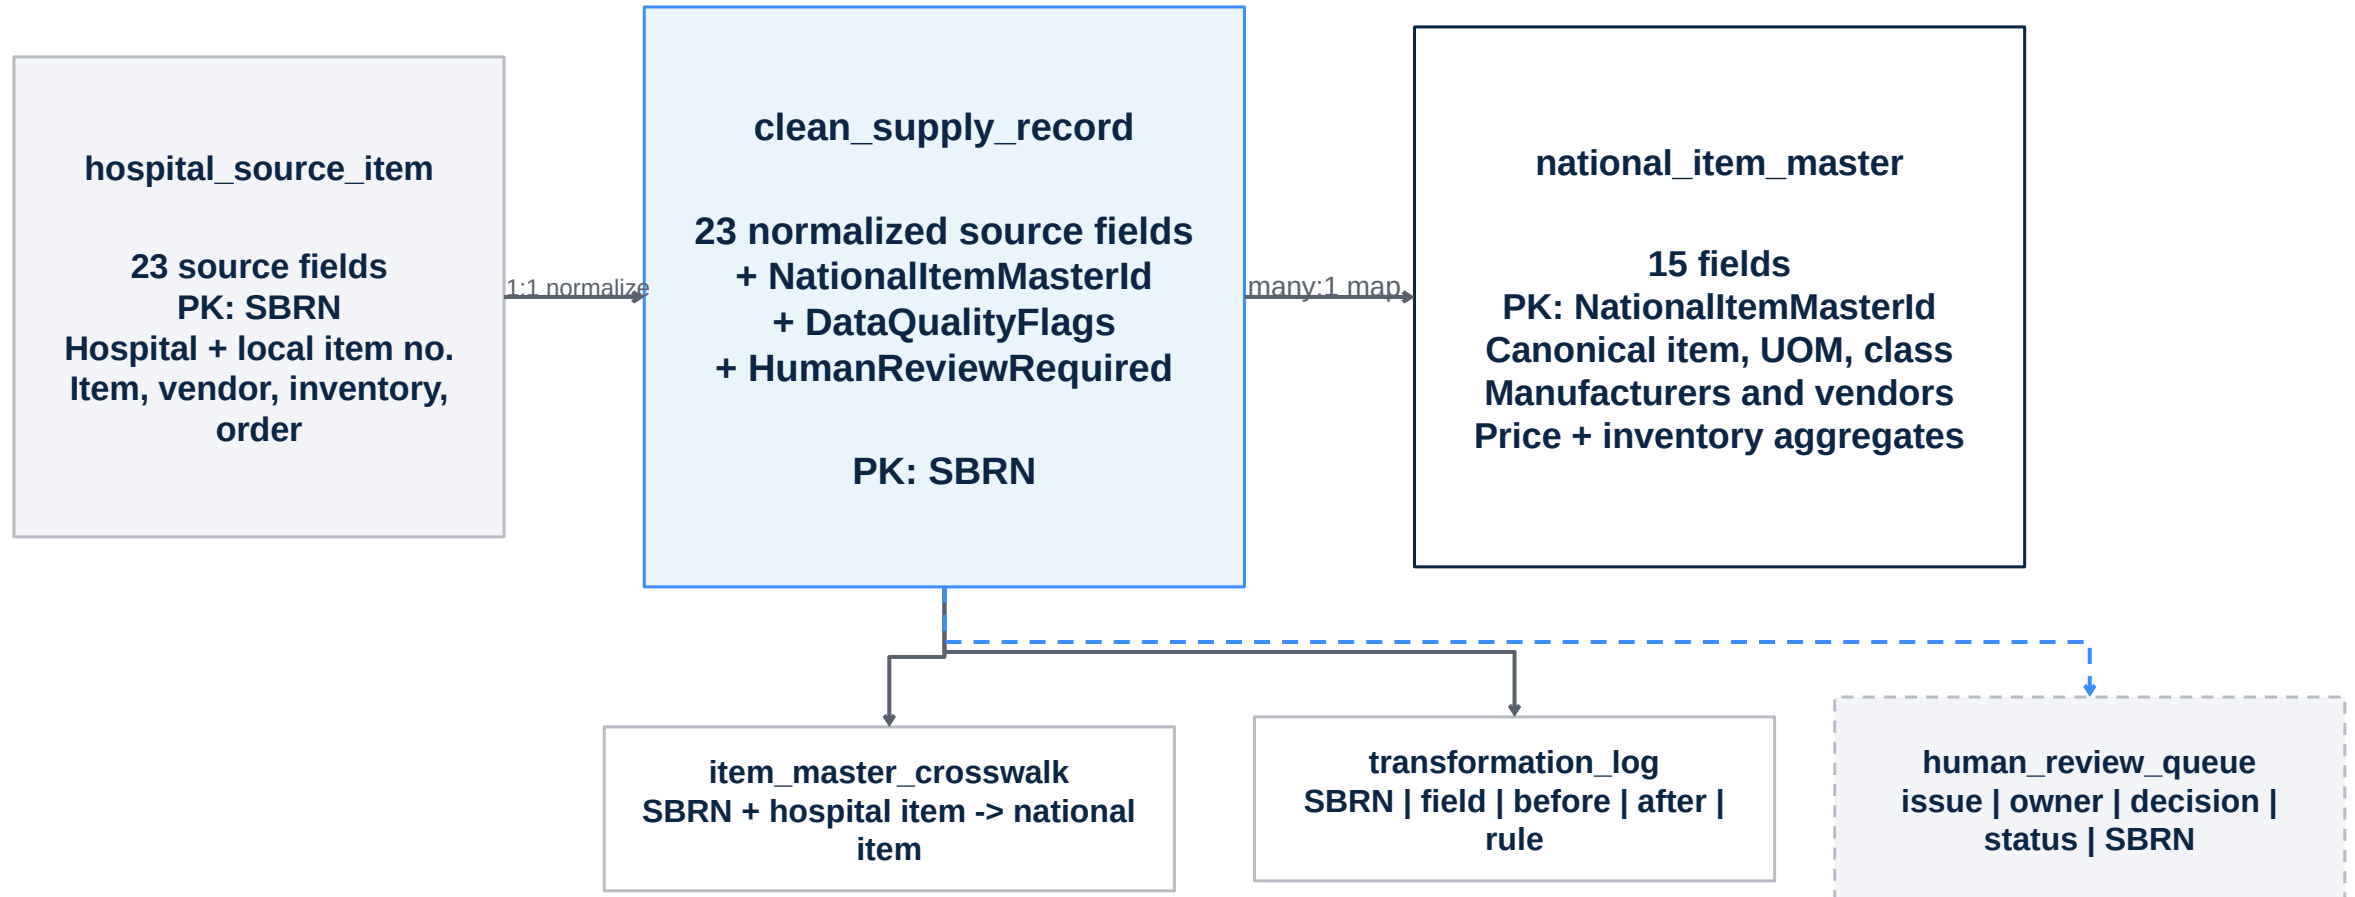

Resource bindings: Hospital, item, PO, purchase date, order status, on-hand/order quantities, lot/batch, expiration, recall, vendor and price.

A national item anchors operations, finance, and governance

Conceptual scope is system-agnostic. Patient and insurance events are represented only where the supplied workflow supports them.

Logical structures preserve every source record and its decisions

Audit structures are first-class logical records, not hidden implementation logs.
